Autopilot SW Infrastructure team
Engineering Department
Tesla, Inc
3500 Deer Creek Rd
Palo Alto, California 94304

Autopilot SW Infrastructure team,

My name is James Vrionis. Truly captivated by Teslas statement to the world, failure is not an option. I will be graduating from the University of California, Santa Cruz (UCSC) with Bachelor of Science in Computer Science. My interest in Tesla, including but not limited to, in specific but limited to, solving the Level 5 autonomy as it pertains to our current transportation system.

I have acquired sufficient skills in scripting languages, such as Perl, and shell able to utilize the powerful pattern matching tools they bring to the table. For the past 5 years I have used *C/C++* extensively, enjoying capabilities not bound to overhead. A former Professor of mine would say, "You don't pay for what you don't use". Certainly, this will set me up to deliver high-quality systems that can be held to higher code of excellence, helping Tesla meet its ultimate goal: fully Autonomous Transportation systems.

An opportunity to join the Autopilot SW Infrastructure team and in order help dissolve our dependence on fossil fuels is a purpose worth fighting for. I can be reached at (555)555 – 5555 or via email at jvrionis@ucsc.edu. I look forward to a formal interview where my passion and qualifications may be seen first hand. I appreciate your consideration for this position.

Sincerely,

James Vrionis
